MEMORANDUM TO: Chief Chemical Officer, Department of the Army  
Attention: Brig. Gen. C. M. Loucks

THROUGH : Assistant Chief of Staff, G-4, Department of the Army  
Attention: Colonel L. F. Stangel

SUBJECT : Technical Liaison

1. The professional staff of this Agency must rely heavily on the knowledge and experience of the individual scientists of the Technical Services to provide on a continuous basis, advice on the advances and status of research, development, production and engineering within the scope of each Service. This professional advice will permit CIA to properly evaluate intelligence information and to supply intelligence data within its assigned mission. It will permit CIA to be conversant with comparable research and production problems in the United States.

2. This Agency realizes that indiscriminate visitation could result in inconvenience and interference with the work of the cooperating agency personnel. We therefore suggest the designation of certain specific individuals for continuous liaison authorization with the Chemical Corps, these designees also to be responsible for authorizing and arranging for contacts of such other CIA personnel with your installations as may from time to time on a limited basis have a recognized requirement for such contacts. To cover research and engineering and in general all scientific matters, our designees for this liaison are:

25X1A9a

[REDACTED] (Principal) Code 143, Extension 3388  
(Alternate) Code 143, Extension 3179

and to cover matters of production and economics:

25X1A9a

[REDACTED] (Principal) Code 143, Extension 2625  
(Alternate) Code 143, Extension 2553

These Officers will be certified to various installations of the Chemical Corps as holding "TOP SECRET" clearance and authorized to discuss all [REDACTED] research and engineering.

25X1A2g

APR 16 1952  
AD/RR 39

3. It is further proposed that these Contact Officers be designated to act for the Agency for a period ending 31 December 1952 and be permitted to visit freely and to arrange appropriate contacts within the Chemical Corps installations by making direct arrangements with the following offices:

Office of Chief Chemical Officer	- Washington, D. C.
Camp Detrick	- Technical Headquarters
Army Chemical Center	- R & E Staff, E.A.
Other Installations	- R & E Staff, Washington

25X1A9a

4. This proposal has been discussed with Brig. Gen. C. E. Loucks, Deputy Chemical Officer, by [REDACTED] of the Office of Scientific Intelligence, CIA, and has been approved in principle. It is further agreed that no data which may be obtained through these consultations will be included in any CIA intelligence production efforts without prior coordination through established intelligence channels.
